Just Register the Catalog EP, and You're Ready to Advertise!

NAVER Shopping Search Ads do not require a NAVER Store.
Even advertisers promoting their own sites or external sites can run ads as long as they are integrated with NAVER Shopping.

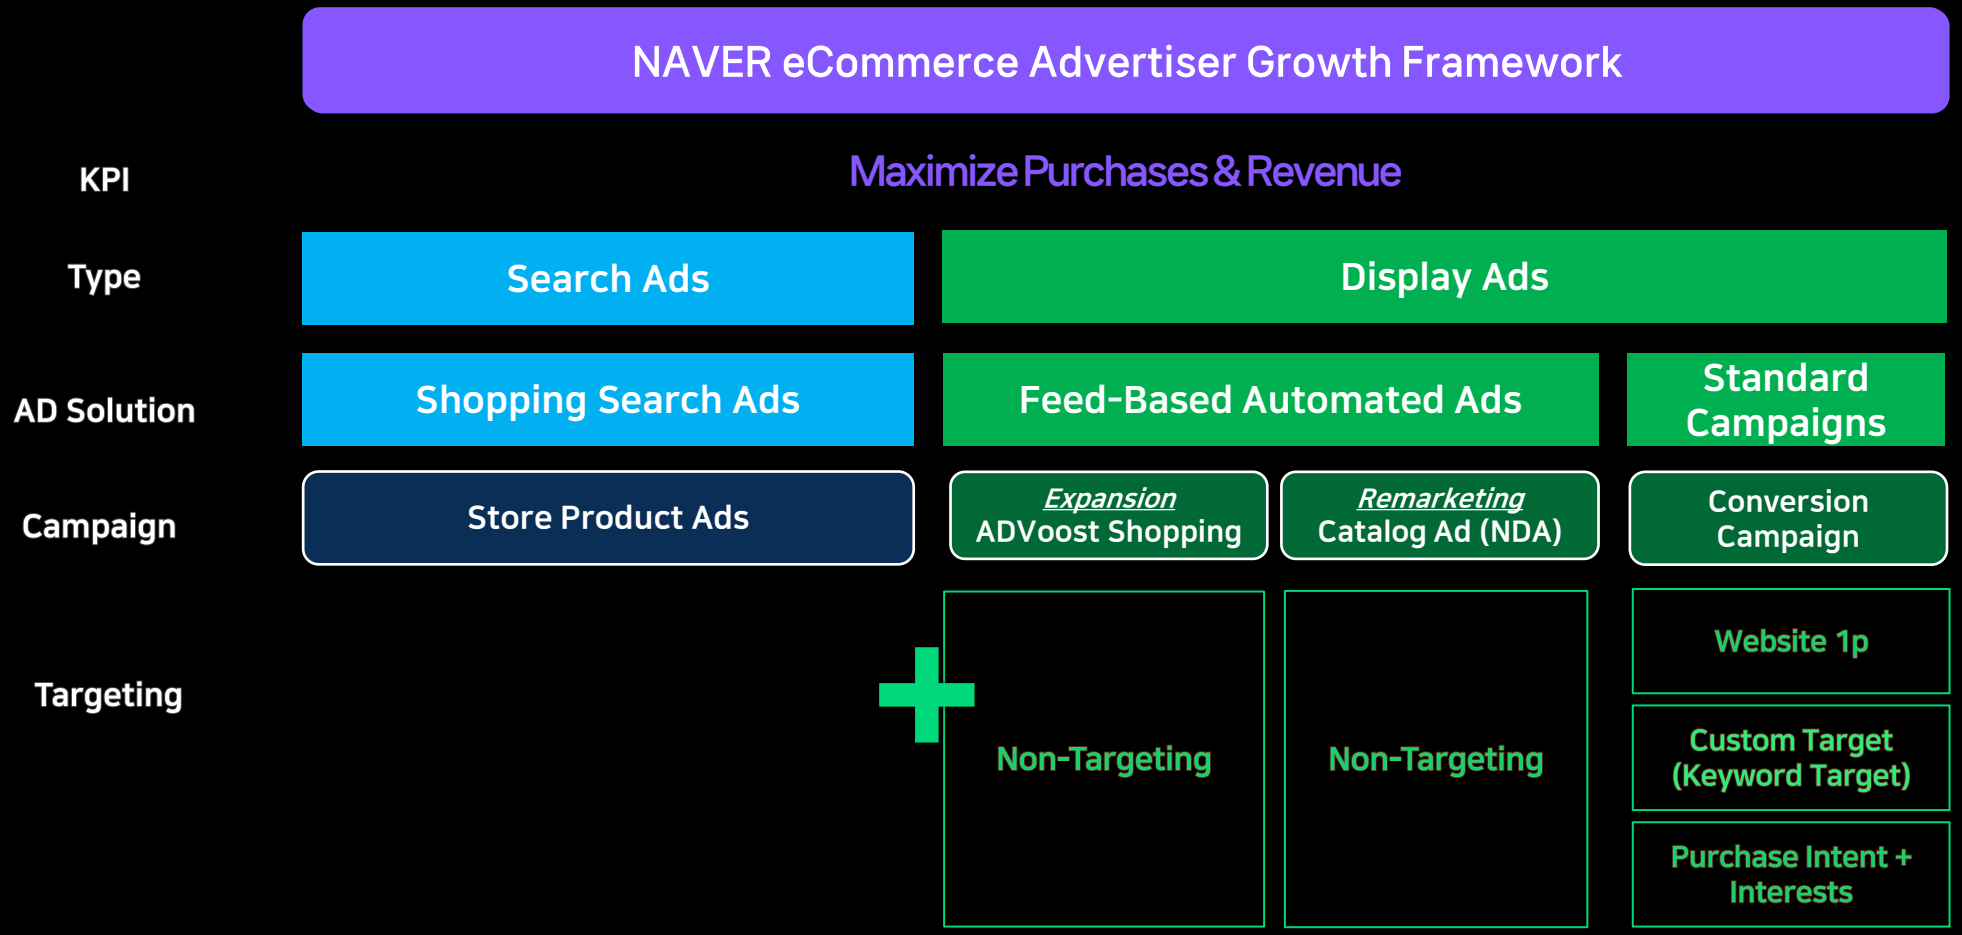

NAVER Shopping EP Creation & Integration Process

Step 1. Sign up for the NAVER Shopping Partner Center (Link) : Registration based on business registration number/ Overseas sellers are also eligible
Step 2. Create and integrate the NAVER Shopping EP: PDF Guide (Link)

NAVER Advertising Onboarding Strategy for Commerce Advertisers

After onboarding to NAVER Shopping, expose your products to high-purchase-intent users at the right moment through product feed-based Search Ads and Display Ads.

NAVER Media Mix Strategy for eCommerce Advertisers

For eCommerce advertisers onboarding NAVER ads, we recommend testing ad products in order of priority, starting from the top.
Build your media mix by referencing each stage's objective and the average ROAS benchmarks.

Recommended Media Mix & ROAS Benchmarks

Ad Type	Ad Product	Objective	Avg. ROAS
Search Ad	Shopping Search Ad	Reach Users at High-Engagement Search Moments Within Naver Shopping to Drive Conversions	500%~900%
Display Ad	GFA – Advoost Shopping	Simultaneous Exposure on Search & Display Placements Maximize New Brand Awareness	600%~900%
	GFA – Catalog Ad (NDA)	Maximize ROAS Efficiency through Remarketing	700%~1000%
	GFA – Conversion	Expand to New Audiences	400%~

* These figures represent the average of other advertisers and do not guarantee actual roas during execution.

Shopping Search Ads: Ads That Expose Your Products in Search Keyword Results

Keywords recommended by the system are automatically matched and served based on the product information registered in the NAVER Shopping Partner Center, including creatives registered for advertising.

Automatic keyword matching based on product name, attributes, and category

Matched Keywords

- Eggs
- Free-range eggs
- Organic eggs
- Free-range organic eggs
- Cage-free eggs
- Organic free-range eggs
- Free-range eggs (40-count)
- 20-count eggs

Shopping Search | Store Product

Shopping Search Ads: Ads That Expose Your Products in Search Keyword Results

Design a campaign structure that allows you to manage and optimize performance simultaneously, based on product type and the number of SKUs you sell.

[Example] Shopping Search Ads Campaign Structure

Case. When You Have Many SKUs (Marketplace / Multi-category shopping mall)

Enable a wide range of products to be exposed to their respective core keywords by grouping them by category.

Campaign	Group	Products / Creatives		
MO /PC	Brand	A	D	G
	Category 1	A	B	C
	Category 2	D	E	F
	Category 3	G	H	I
	...		...	

Case. When You Have Few SKUs (Single-category shopping mall)

Match popular product creatives to multiple core keywords by grouping them by key keyword sets.

Campaign	Group	Products / Creatives		
MO /PC	Brand	A	D	G
	General Core Keyword 1	A	B	C
	General Core Keyword 2	A	E	F
	General Core Keyword 3	A	H	I
	...		...	

Shopping Search | Store Product

Shopping Search Ads: Ads That Expose Your Products in Search Keyword Results

Shopping Search Ads display creatives by automatically reflecting the information registered in the NAVER Shopping Partner Center. There are four key factors that have the greatest impact on CTR. Performance can be improved by customizing these elements at the creative level.

Core Elements

- ★ ① Product Image : Use visually appealing images
- ★ ② Product Name : Include core keywords within the product name
- ③ Price : Set competitive pricing
- ④ NAVER Pay Points : Increase awareness through additional price benefits
- ★ ⑤ Additional Promotional Copy : Include promotions and extra discount information

- ★ ⑥ Reviews / Purchases / Favorites : Display dynamically based on review and purchase volume
- ⑦ Official Store Badge : Appeal to credibility through official store certification
- ⑧ Seller : Set accurately to enable brand keyword matching
- ⑨ Shipping Information : Increase customer trust by highlighting shipping services

Shopping Search | Store Product

Shopping Search Ads: Best Creative

To achieve higher CTR with Shopping Search Ads, keep the following Best Creative principles in mind.

1) Use eye-catching images and product names, and make sure to leverage additional promotional copy and Shopping product add-on information to highlight what sets your store apart.

Worst

- Images that fail to clearly convey the product's USP
- Emphasizing unnecessary elements unrelated to the product

Best

① Images that clearly communicate the product's USP (e.g., thickness, firmness, comfort for the lower back)

② Highlight differentiation through additional promotional copy

③ Display Shopping add-on information (e.g., ratings, number of reviews, number of favorites)

Display Ad #1

NAVER > Shopping Placements

Introducing GFA Campaign [Operating Structure] Best Practices that Are Most Effective for Driving Conversions.

Recommended GFA Operating Structure

Minimize duplicate campaign setups for the same objective

Segment by placement and audience

Avoid target overlap across ad groups

One clear message with a well-defined USP

Activate 3–5 creatives per ad group

NAVER recommends a performance-driven account structure consisting of:
Multiple campaigns by objective + multiple ad groups per campaign,
with up to 5 creatives per ad group.

Case 1

Q. Early in operations: "I'm not sure which targets and placements perform best."

A. Use testing to identify high-performing target × placement combinations first.

Campaign	Ad Groups
Conversion Objective Campaign A	Feed × Target A
	Main Banner × Target A
	Smart Channel × Target A
	Feed × Target B
	Main Banner × Target B
	Smart Channel × Target B
Catalog Campaign B	Run in parallel (Granular targeting is not recommended at this stage)

☑ Start with 1 conversion campaign + 1 catalog campaign
cf) For brands with limited audience scale, it is recommended to first secure sufficient volume through traffic campaigns, then expand operations by fully leveraging customer journey targets and custom targets
(e.g., further segmenting keywords within custom targeting).
☑ Based on test results, select and focus on high-performing placement × target combinations
☑ Operate catalog campaigns with maximum scale to broaden reach

Case 2

Q. Mid-operation: “I want to scale volume (in the short term).”

A. Operate with a two-track setup: an Always-On Campaign + a Promotion Campaign.

Campaign	Ad Group
Always-On Campaign A (Conversion Objective)	Feed × Target A
	Main Banner × Target A
	Feed × Target B
	Smart Channel × Target B
Promotion / Short-term Campaign B (Traffic Objective)	Feed × Target A
	Feed × Target B
Catalog Campaign C	Grouped by audience size (Granular targeting is not recommended)

☑ Leverage high-performing placement × target combinations validated in the early stage
→ ‘Scale short-term volume through Traffic campaigns

☑ Across always-on and promotion campaigns, downscale or reallocate budget from underperforming campaigns as needed

Case 3

Q. When running a campaign that tests new creatives every week, what structure works best?

A. Have creatives compete under the same ad group.

Campaign	Ad Group	Creatives
Always-On Campaign A (Conversion Objective)	Feed X Target A ★	Always-On Creative ①
		Always-On Creative ②
		Test Creative ①
		Test Creative ②
	Main Banner × Target A ★	Always-On Creative ①
		Always-On Creative ②
		Test Creative ①
		Test Creative ②
Promotion / Short-Term Campaign B (Traffic Objective)	Feed X Target A	
	Feed X Target B	

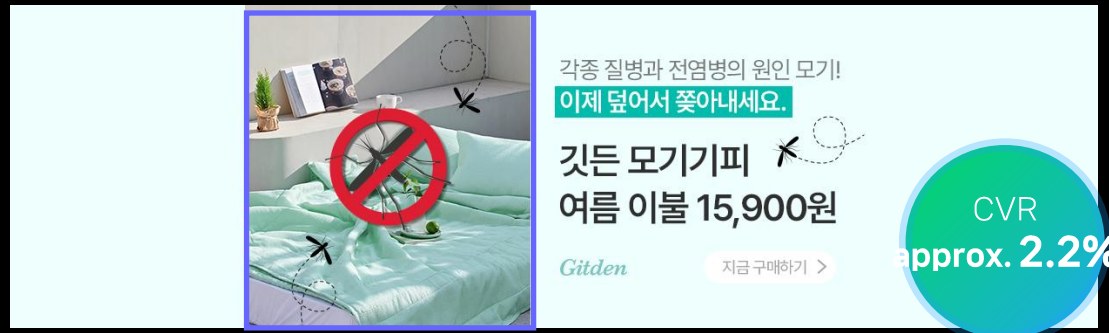

☑ Test creatives within the same ad group
→ Creating separate ad groups can cause audience overlap and scale dilution
→ Since delivery is optimized based on CTR, creatives should compete in the same delivery environment

☑ Ensure sufficient testing volume per creative
Operate with only 3–5 creatives per ad group to maintain reliable test results

Case 1. Daily Essentials

Maximize product use cases, purposes, and benefits, while clearly addressing users' pain points.

Must-Check Areas Before Going Live with a Conversion Campaign Introducing the GFA Campaign Setup Checklist.

Before launching your campaign, make sure nothing is missing. Please check carefully ☺

Optimized Conversion Type

Select "Purchase," "Add to Cart," or "All Conversion Events"

★ **It is recommended to map conversion events consistently with your actual business model**
(e.g., Purchase = Purchase, Add to Cart = Add to Cart)

cf. For service-based industries (e.g., finance, education, donations, other non-commerce verticals)
① Select "Purchase" as the main conversion event ② Choose All Conversion Events
→ Even if an actual purchase does not occur, GFA conversion campaigns can still be operated

* "All Conversions" includes events that may not directly map to purchases, but are supported by the GFA platform
(e.g., Lead, Page View, Registration, Membership)

Conversion Tracking

Conversion tracking must be turned ON
Track conversions via conversion tag installation
(including micro-conversions such as specific page visits or Add to Cart)

Conversion Tracking Management ★

All landing pages used for ads must be registered as conversion-tracking websites

Using unregistered pages as ad landing pages may result in missing conversion data
ex. Promotion campaigns using external landing pages
(open marketplaces, Kakao Shopping, etc.) often experience conversion loss

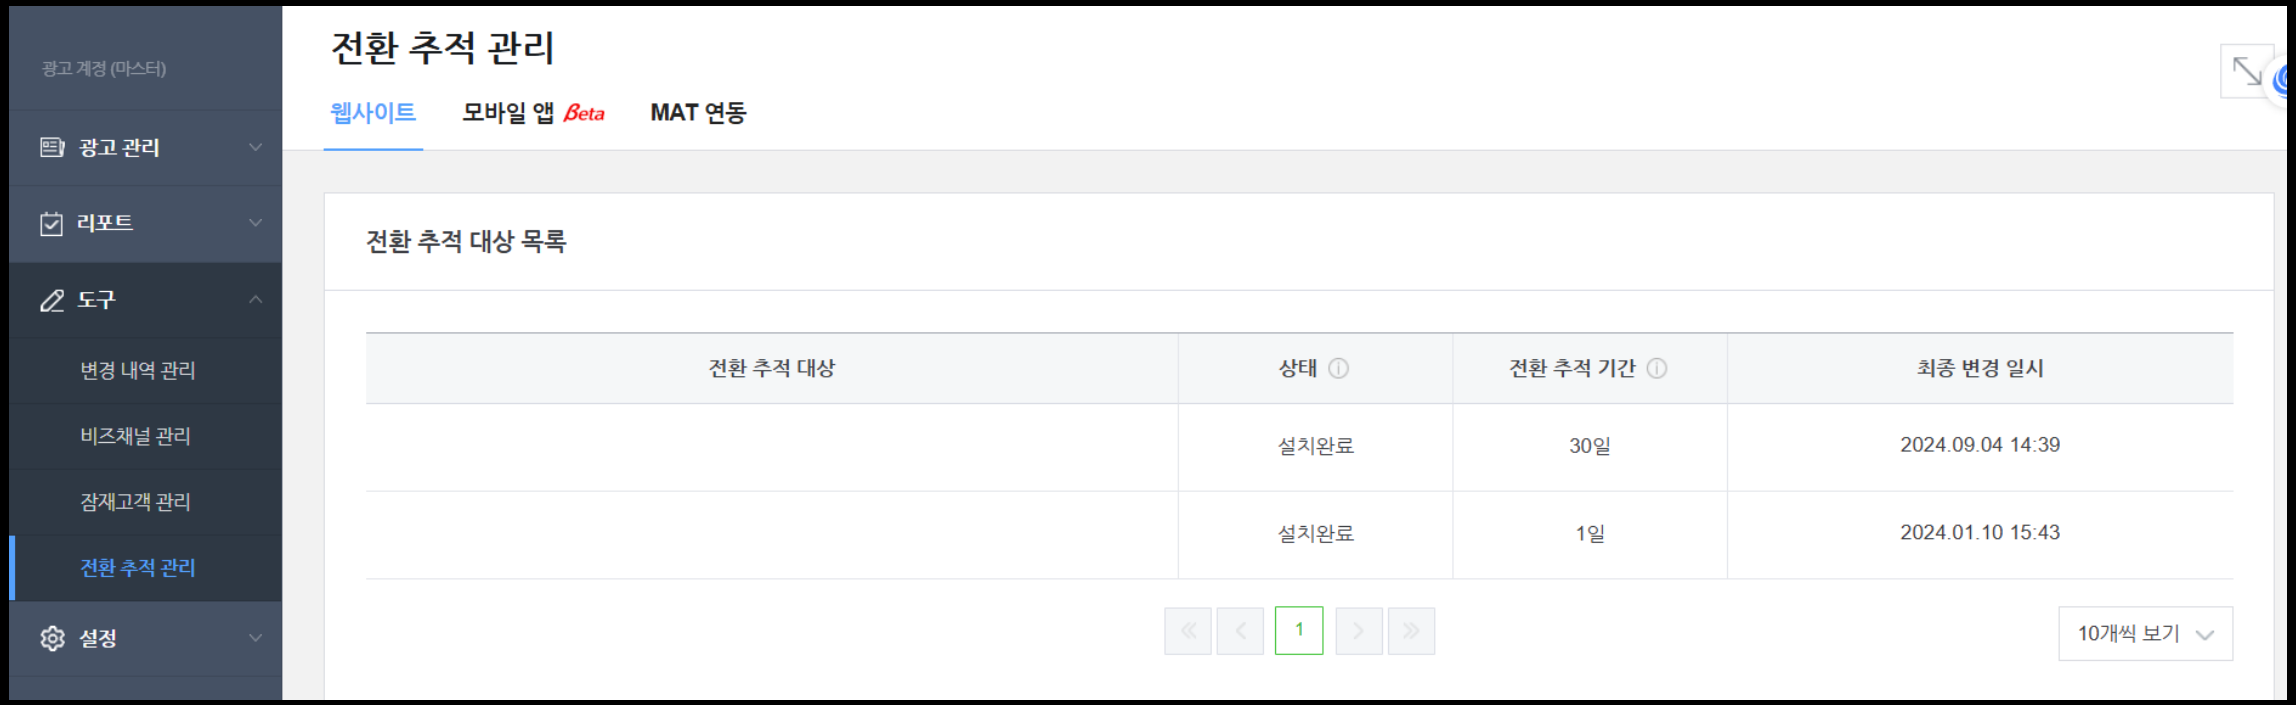

GFA Operations Best Practice

Conversion Tracking Management

[Conversion Tracking Management] Website → Verify that the ad landing page is registered

· 웹사이트에서 발생한 광고 전환 성과를 측정하기 위해서는 아래의 과정이 필요합니다.

1) 웹사이트 전환 추적 신청 및 전환 추적 스크립트 설치
2) 캠페인 > 전환 추적 대상 설정
3) 전환 추적 대상과 도메인이 일치하는 URL을 소재 랜딩으로 설정

GFA Operations Best Practice

Conversion Tracking Management

Q. There are little to no conversions from a newly launched live campaign.

A.) Check whether the conversion tracking script is installed correctly (e.g., missing conversion parameters, incorrect script ID).

Case 1

- Issue: Purchase conversions are recorded, but purchase revenue is not tracked (conv - amt = 0))
- Cause: Missing conversion value parameter in the script

In the current script version, conversion counts (e.g., purchases, add-to-cart events) can still be tracked even if parameters are missing. However, purchase revenue cannot be tracked. → This makes it difficult to verify ROAS and run/optimize Catalog Ads. (★ For commerce advertisers, this must be checked to ensure no missing parameters.)

Case 2

- Issue: Conversions stop being tracked due to duplicate conversion setup using the same script ID
- Cause: A script with a unique ID is installed twice, causing the PURCHASE event to fire twice

(ex. Similar to cases where a Google Analytics script is migrated to Google Tag Manager without removing the previously installed GA script, causing page views to be counted twice)

Must-Check Areas Before Going Live with a Conversion Campaign Introducing the GFA Campaign Setup Checklist

Please make sure to review all items carefully before going live. ☺

Bidding and Budget

When the optimization goal is "Purchase Complete," select a bidding strategy optimized for maximizing conversion volume or conversion value.

Maximize Conversion Value

- Most effective for commerce-driven verticals such as retail and e-commerce/ More suitable for always-on campaigns rather than short-term promotions
- Requires a sufficient volume of high-value purchase conversions
- At least 30 valid purchase conversions within the past 7 days is recommended

Maximize Conversions

- A bidding strategy focused on generating a higher number of purchase conversions

When using Campaign Budget Optimization (CBO), it is recommended to apply this setting after the campaign status has progressed from "Eligible (Learning)" to "Eligible."

Creative Selection Method

Choose between Balanced Delivery vs. Performance-weighted Optimization

Balanced Delivery

- When you want to test all creatives evenly

Performance-weighted / Optimized Delivery

- When identifying high-performing creatives and continuously adding new ones

(cf. In optimized delivery, exposure may be concentrated on a single creative)

[Note] If too many creatives are active within one ad group, the budget can be spread too thin per creative.
→ It is recommended to keep 3–5 creatives active per ad group, and adjust the creative selection method flexibly depending on campaign performance and objectives.

Must-Check Areas Before Going Live with a Conversion Campaign Introducing the GFA Campaign Setup Checklist

Please make sure to review all items carefully before going live. ☺

Audience Targeting	**Keep targeting simple.** When using machine learning to maximize conversion value, users with a higher predicted conversion value are automatically prioritized. Over-segmenting or overly narrow targeting can significantly reduce audience size, making it difficult to deliver ads and optimize performance.
Ad Group Budget Settings	**Set a minimum daily budget of KRW 100,000 per ad group, and configure both the daily budget and the number of ad groups to ensure stable delivery and efficient optimization.**

E.O.D.
THANK YOU!

NAVER
